## Announcing Omnis Studio 4 Support

On March 23 MasterObjects will release **MasterStudio 1.0.2** and **PlanBoard 3.2.1**. These free updates for registered developers have been tested and are now supported on Omnis Studio 4.0. Omnis Studio 3.2.x and 3.3.x remain supported as well.

**Amazingly Powerful...**

**MasterStudio** is a powerful object-oriented development framework for Omnis Studio. Inspired by the impressive frameworks available to the Java community, MasterStudio implements high-end design patterns to give Omnis Studio developers unprecedented capabilities for quickly building advanced and maintainable GUI-based applications.

Four years in the making, MasterStudio was written entirely in Omnis Studio by a team of experts with years of experience in object-oriented design. MasterStudio comes with a comprehensive 254-page Developer's Guide that explains the design patterns used in MasterStudio. The book includes a complete class reference and UML class diagrams.

## Add Graphical Scheduling to your Omnis Applications...

MasterObjects **PlanBoard** is a GUI framework that allows you to easily add advanced interactive scheduling to your Omnis (Studio or Classic) applications. Developers worldwide are using PlanBoard for scheduling tasks, people, machines, order status, rooms, TV programming, advertising, satellite broadcasts, appointments, projects, car rentals, etc.

PlanBoard for Omnis Studio is 100% Omnis code and was built on top of the MasterStudio base framework. For most applications, subclassing a single so-called "PlanBoard delegate object" is sufficient. You can also subclass any part of a PlanBoard window to give it your own look & feel. One or more PlanBoard panes can be added to an existing window class. You can use any database supported by Omnis. PlanBoard uses your own lists, regardless of the column names. Most PlanBoard classes come unlocked!

 **PlanBoard supports live language switching!**

**Beautiful. Powerful. Maintainable. Affordable. Easy.**

"In a matter of hours I was able to add two graphical views to our application. One view displays prioritized tasks by color. The other view shows all tasks including tooltips when you hover over them. Seeing half a year or even a year gives us a clear picture on our progress. Users can right-click individual tasks and zoom in to see more details."
