

"MasterStudio has dramatically reduced our development effort and time. Productivity was significantly enhanced, resulting in a considerable value increase for our customers."

-- Paul Klaassen, VDA Business Solutions, The Netherlands

MasterStudio Framework for Omnis

On February 8, 2005, Master Object Consultancy will release MasterStudio 1.0.5, adding automatic multi-criterion field searching and detail-based SQL searching to any MasterStudio-built window.

Amazingly powerful

MasterStudio is a powerful object-oriented application framework for Omnis Studio. Inspired by the impressive frameworks available to the Java community, MasterStudio implements high-end design patterns to give Omnis Studio developers unprecedented capabilities for quickly building advanced and maintainable GUI-based applications.

Four years in the making, MasterStudio was written entirely in Omnis Studio by a team of experts with years of experience in object-oriented design. MasterStudio comes with a comprehensive 254-page Developer's Guide that explains the design patterns used in MasterStudio. The book includes a complete class reference and UML class diagrams.

Graphical Scheduling in 100% Omnis

PlanBoard for Omnis is a GUI framework that allows you to easily add advanced interactive scheduling to your Omnis (Studio or Classic) applications. Developers worldwide are using PlanBoard for scheduling tasks, people, machines, order status, rooms, TV programming, advertising, satellite broadcasts, appointments, projects, car rentals, etc.

PlanBoard for Omnis Studio is 100% Omnis code and was built on top of the MasterStudio base framework. For most applications, subclassing a single so-called "PlanBoard delegate object" is sufficient. You can also subclass any part of a PlanBoard window to give it your own look & feel. One or more PlanBoard panes can be added to an existing window class. You can use any database supported by Omnis. PlanBoard uses your own lists, regardless of the column names. Most PlanBoard classes come unlocked!

 *Supports multiple languages!*

Maintainable, affordable, easy.

"In a matter of hours I was able to add two graphical views to our application. One view displays prioritized tasks by color. The other view shows all tasks including tooltips when you hover over them. Seeing half a year or even a year gives us a clear picture on our progress. Users can right-click individual tasks or zoom in to see more details."
